

Speech Transfer Systems (STS) provide clear sound for communication between a glass barrier

The Speech Transfer System offers an immediate solution for clear two way communication in today's COVID-19 environment and the required use of protective masks.

Specifically designed for grocery and retail chains, the STS enables communication assistance to people living with hearing loss by incorporating a localized hearing loop system.

The Speech Transfer System enables clear voice communication between customers and staff through glass security screens. The integrated hearing loop greatly benefits hearing impaired customers allowing transactions to be conducted efficiently without difficulty or delay, even in noisy environments.

Applications:

For use where one to one communication takes place at a counter or booth with a security screen.

- Supermarkets
- Retail
- Hospitals & Clinics
- Pharmacies
- Banks
- Post Offices
- Airports
- Libraries
- Ticket Kiosks
- Information Centers
- And So Much More

Benefits:

- Superb voice reproduction
- The system is always on
- Touch free for all users
- Easy to wipe clean and disinfect
- Robustly built
- Low space-solution
- Quickly implemented & installed
- Answers ADA compliance

“ The once-routine activity of shopping has become more stressful. This is especially true for persons with hearing loss who shop at outlets that use protective sneeze guards at the check out counter. Sneeze guards further create a barrier between the speech of the person behind the counter and the purchaser. The speech Transfer System is a godsend for these public spaces. It enables many persons with or without hearing loss to effortlessly understand what is being said. ”

Peggy Ellertsen, C.C.C.-S.L.P. Member, Board of Directors, Hearing Loss Association of America
